

4. Ability to identify problems, analyze issues and develop solutions/resolutions and follow-up.

I use problem solving skills to resolve problems, evaluate information and determine next steps and appropriate actions. Throughout my career I have learned and practiced problem identification, analyzing and developing solutions.

Whenever I am given tasks to accomplish in a specific order and without overlapping tasks. I analyze all the components of the problem and developed a plan to accomplish all the tasks within the timeframes and without allowing any task overlap. I successfully completed the task and have been commended by the instructor.

I have developed strong skills in analyzing scope, cost and duration. I break projects down into phases and manageable tasks. Many variables change during the project, in order to manage deadlines and ensure quality results; I continuously review the status, analyze the different variables, and develop solutions.
